

Mogaha Chioma Vivian

Customer Support Specialist • IT Support • Computer Science Graduate

Anambra, Nigeria | mogahachioma03@gmail.com | +234 806 993 2553

PROFILE

Computer Science graduate with hands-on customer support experience in the cryptocurrency sector at BITUNIX, where I worked omnichannel queues across live chat and Zendesk before moving into the retention team, engaging users directly through Discord. I'm skilled at translating technical account issues into clear, calm guidance, and at building the kind of trust that keeps a user engaged rather than lost.

At Pa-cent Technologies, I brought that same clarity to teaching non-technical learners everyday software, helping them build real confidence rather than just complete a session.

I'm looking for a remote or hybrid role in customer support, technical support, or operations, ideally within FinTech, Web3, or SaaS, where technical grounding and clear communication both matter.

CORE STRENGTHS

- Omnichannel customer support & retention, live chat, Zendesk, Discord community engagement
- Technical onboarding and one-on-one training for non-technical users
- HTML5 & CSS3 fundamentals
- Microsoft Office & Google Workspace, documentation, reporting, presentations
- Accurate data entry, records management, and plain-language technical communication

PROFESSIONAL EXPERIENCE

Customer Service Representative

BITUNIX

- Managed omnichannel support queues across live chat and Zendesk, resolving issues on first contact where possible and escalating what genuinely needed a specialist.
- Logged and tracked every interaction in Zendesk to keep accurate, consistent records across shifts and handoffs.
- Worked directly with teammates on escalated cases rather than just passing them along.

Retention Team

BITUNIX

- Moved into the retention team, engaging users directly through Discord to support re-engagement and reduce churn.
- Used direct, community-based communication to rebuild trust with users experiencing friction, rather than relying on ticket replies alone.

IT Skills Facilitator

Pa-cent Technologies Limited

- Taught non-technical learners the Microsoft Office tools and everyday software they would actually use, not a generic curriculum.
- Broke down technical concepts into language people could act on immediately.
- Worked one-on-one with learners who needed extra support to build real, lasting confidence, not just pass a session.

PROJECTS

FM University of Science and Art — Multi-Page Website

Designed and built a full multi-page website (home, about, courses, blog, contact) using HTML and CSS, structuring content across academic programmes and campus facilities.
